SIGNALLING CHANGES

DualCom G2r
eliminates call costs
and works
where telephone
lines can't

Single Path Signalling

DualCom G2r is a single path variant of Europe's best selling dual signalling fire and intruder alarm device, the DualCom GradeShift® range.

DualCom G2r offers alarm signalling via a radio path (GPRS/GSM) from the protected premises to an Alarm Receiving Centre (ARC). In the past, Digital Communicators and telephone line-based technology has been used for single path signalling but this is not always practical and can add unnecessary expense.

No telephone line - no problem

DualCom G2r is ideal as a solution when a telephone line is not available and can securely send a signal to the ARC regardless of the limitations imposed by a property and its infrastructures. By utilising a Radio path instead of a telephone line, there are no associated call costs or rental costs that you would experience with telephone line based signalling.

Trusted and Reliable

CSL DualCom are the market leading supplier of intruder alarm dual-signalling devices, trusted by hundreds of thousands of homes and businesses.

So many Alarm Installers place their trust in DualCom because the integrity of our signalling is powered by the DualCom Gemini Managed Network which adds additional levels of protection to your alarm system. Gemini contacts the DualCom regularly and reports on its exact status, helping your Installer to provide you with the best possible service.

DualCom G2r offers a radio alarm signalling service with a difference. It uses mobile radio to send alarm signals to the ARC and can be purchased with either a Vodafone SIM card or CSL DualCom's award winning WorldSIM®. DualCom WorldSIM® is a multi-network SIM card that can utilise any mobile phone network. Rather than losing connection, DualCom G2r with WorldSIM® will transfer to the strongest available network in order to deliver your alarm signal, offering maximum, reliable performance from its single radio path. As DualCom is charged as a fixed tariff the costs are set no matter how much activity there is.

Future Proof

Telephone networks in both the UK and Ireland are undergoing upgrades to accommodate higher speed broadband services. These include migrating from copper to fibre networks and new cable networks sometimes known as NGNs. This is essentially removing the component that Digital Communicators rely on to send a signal.

DualCom G2r is guaranteed to be unaffected by these changes as it is not reliant on any land-line or building infrastructure technology.

G3r VARIANT

The DualCom G3r offers all of the same benefits as the G2r but in addition Gemini checks that the DualCom is working more regularly. These hourly checks allow your installer to notify you of a lack of signal in an earlier instance.

For extended features explore the DualCom Calibre® range.

Specification:

- Fixed tariff means unlimited signals with no hidden charges
- Future network compliant
- WorldSIM® Access all areas – access to all mobile networks in a single product
- True wireless EN Grade 2 signalling for lower risk single path solutions
- No need for a telephone line and a dedicated line for signalling can be cancelled
- No telephone line rental or call charges
- Compatible with all standard alarm systems
- Can be used for other non security applications that require remote monitoring
