

BANDITTM

The world leader in security fogging

“What can’t be seen.... can’t be stolen”

Created by Bandit UK Limited January 2006

BANDIT UK

Are traditional security
systems effective?

Yes.....

Locks, bars, shutters, bollards and ...

surveillance equipment such as CCTV...

are effective deterrents at keeping the majority of potential intruders out.....

Furthermore.....

Alarm Systems

importantly inform a monitoring station
if intruders successfully penetrate those
defences

However.....

the problem now is that there are no deterrents
or defences left to stop intruders from
perpetrating their intended crime

Why?

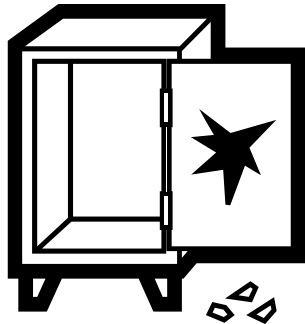

Because...

... response times by the authorities can be anything from 10 minutes to...?

..... and burglaries are typically completed within the first three or four minutes of entry

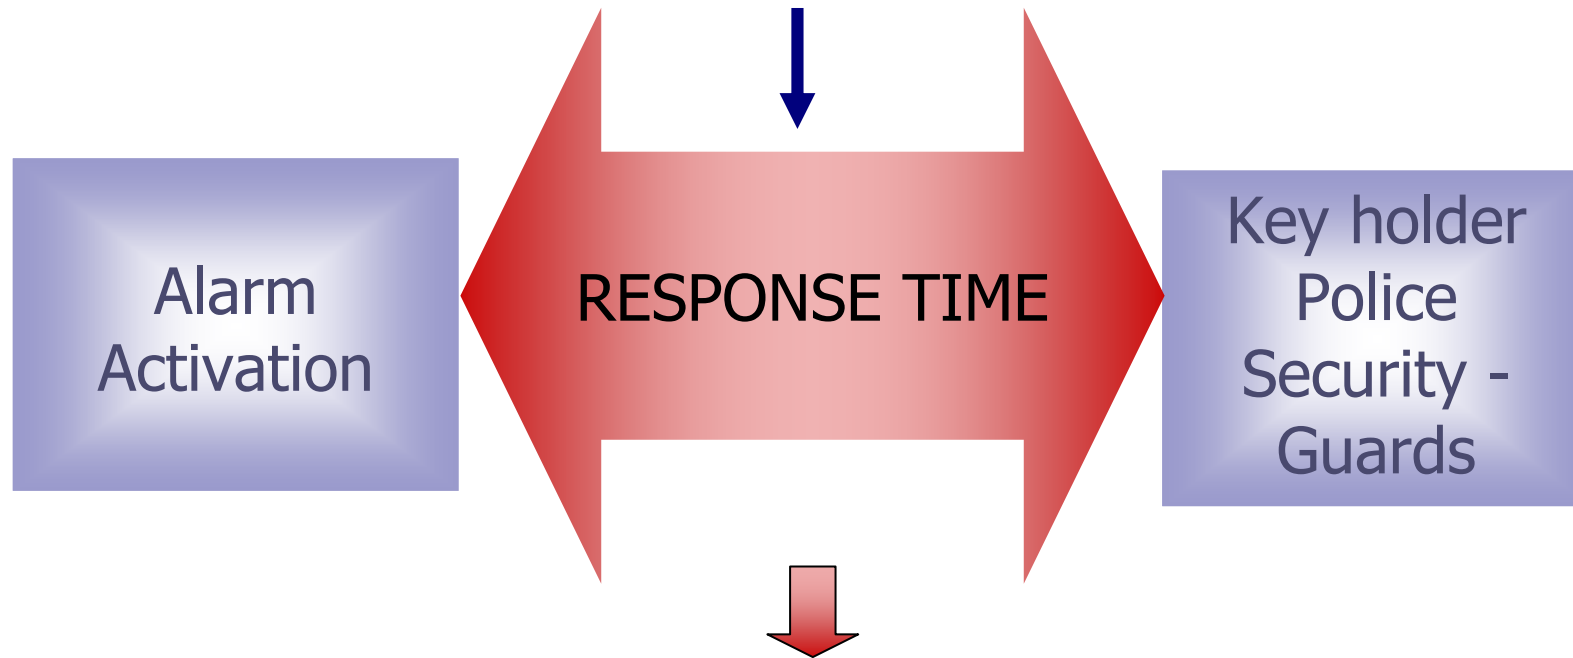

which means that the intruders know they can be 'long gone' well before the authorities arrive

The fact is that...

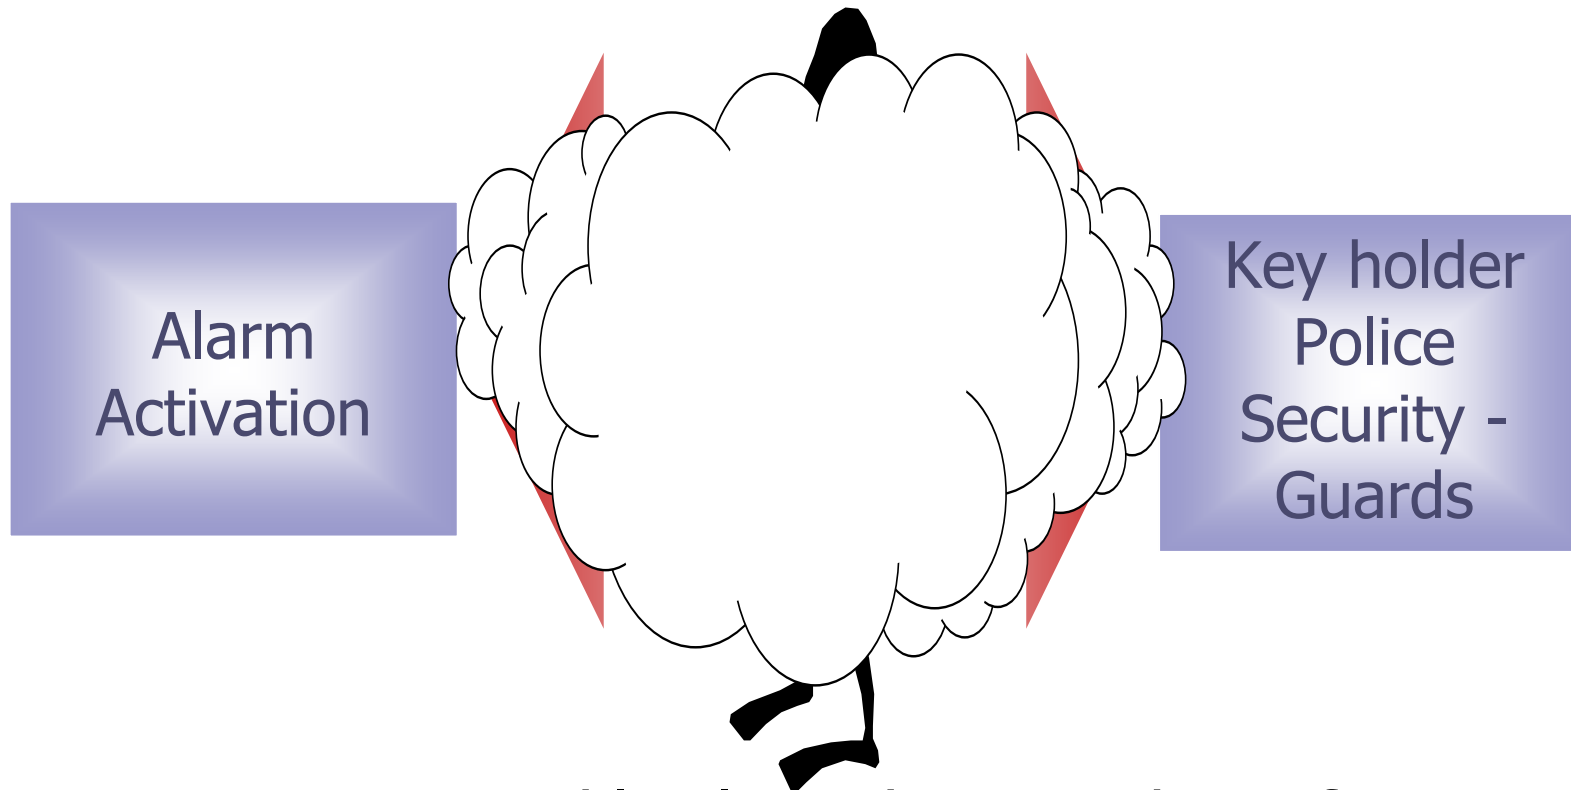

Today's criminal fraternity confidently and effectively utilise this

as their 'window of opportunity' to perpetrate their crimes and get clean away

*With **BANDIT**...*

We quickly close their window of
opportunity ...

...so they 'can't steal what they can't see'

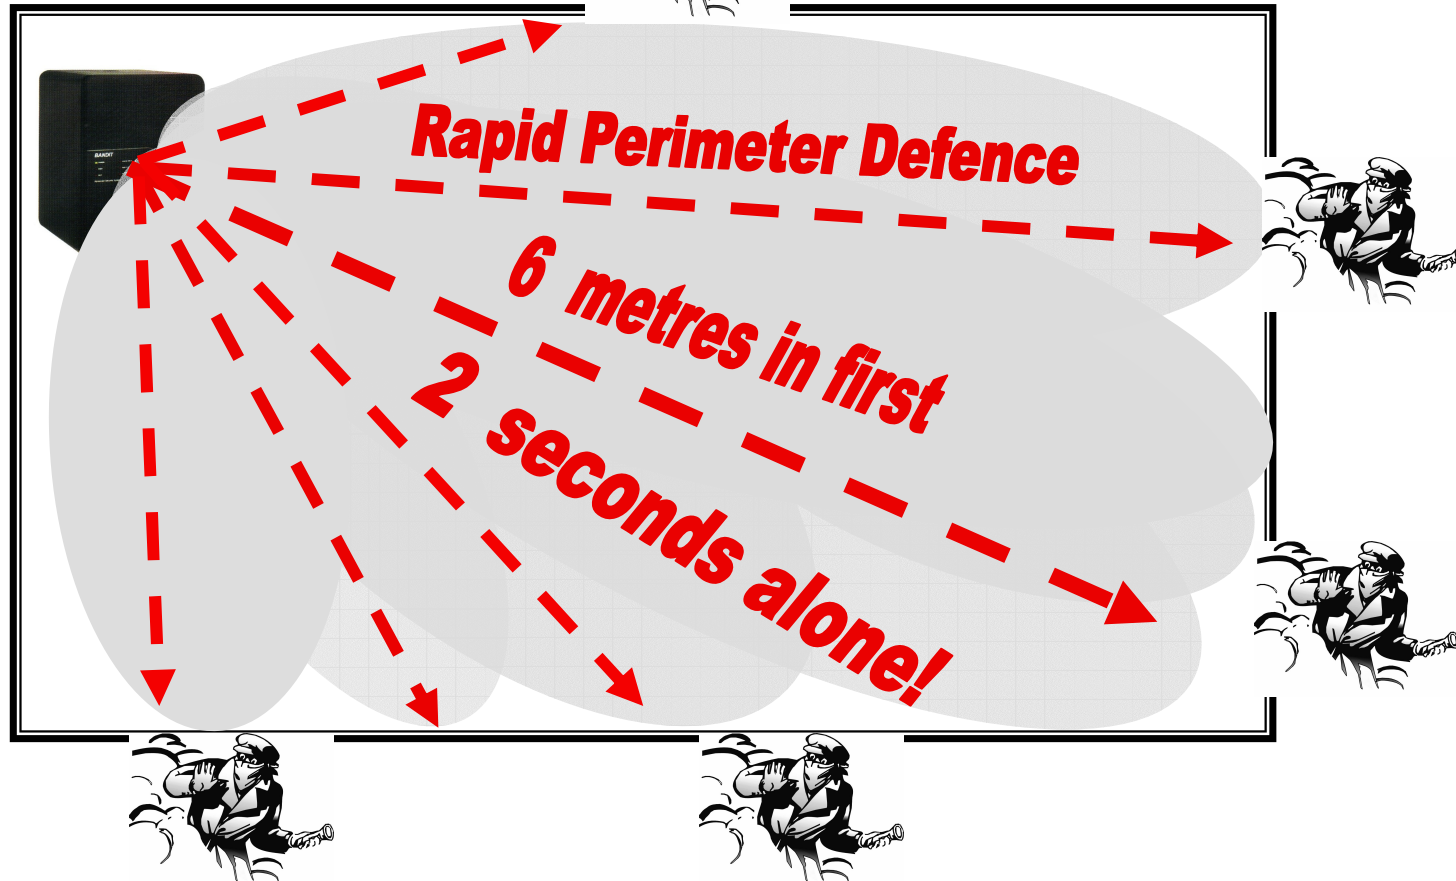

BANDIT UK

How?

By very rapidly releasing a huge plume of fog the moment an intruder is detected...

it reaches the perimeters so fast that it can stop them before they even get in!

BANDIT UK

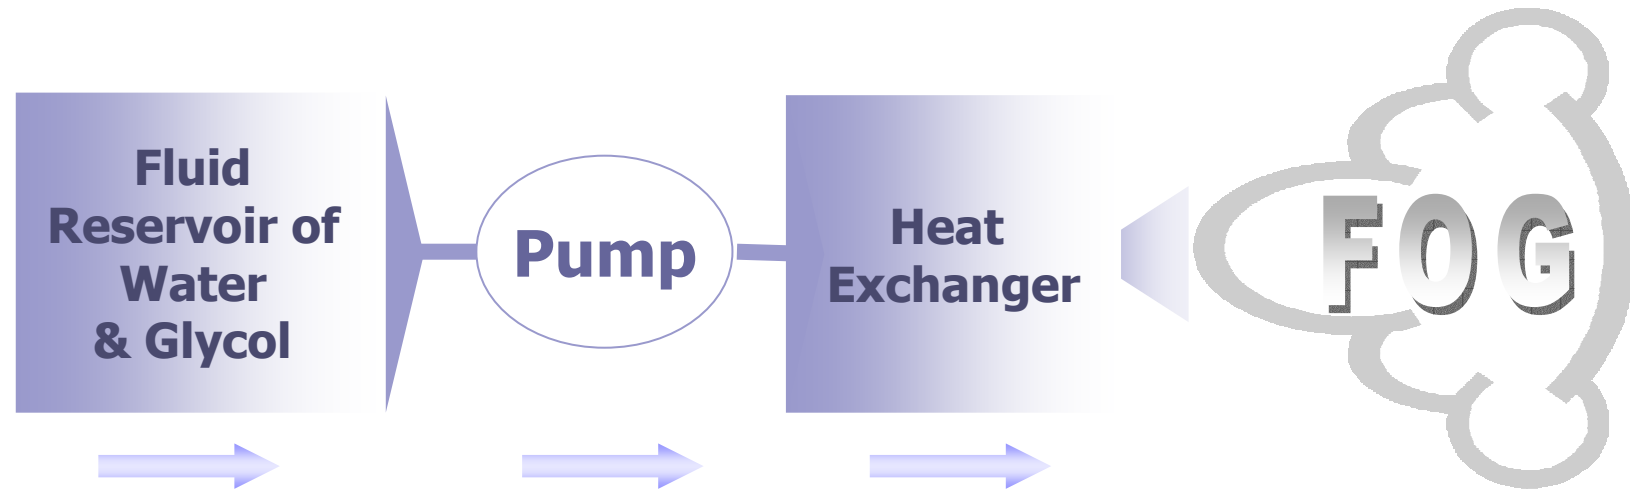

In terms of
Speed, Reliability
and *Running Costs,*
what makes
BANDIT
different to traditional
'smoke systems'?

1. SPEED.....

This is how traditional 'smoke systems' produce fog....

The speed of fog production is limited by the speed of the 12 volt pump

Progress.....

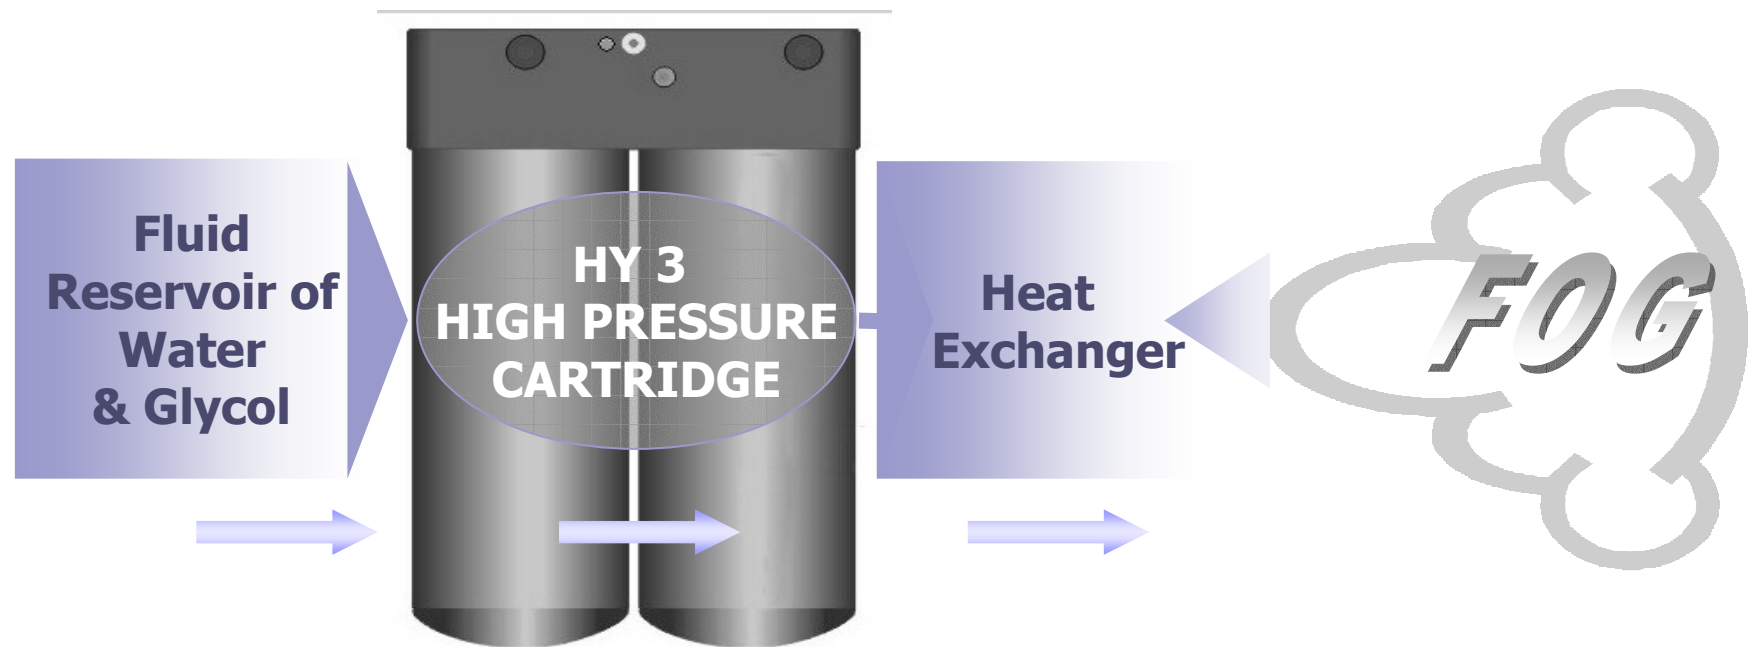

*Bandit wanted to advance from this
slower 'progressive'
fog generating system to a new,
ultra-rapid 'perimeter' defence
system, which would deter the
intruder from entering the
protected room from the outset*

The result.....

SPEED cont.....

The development of the **patented** HY3 cartridge....

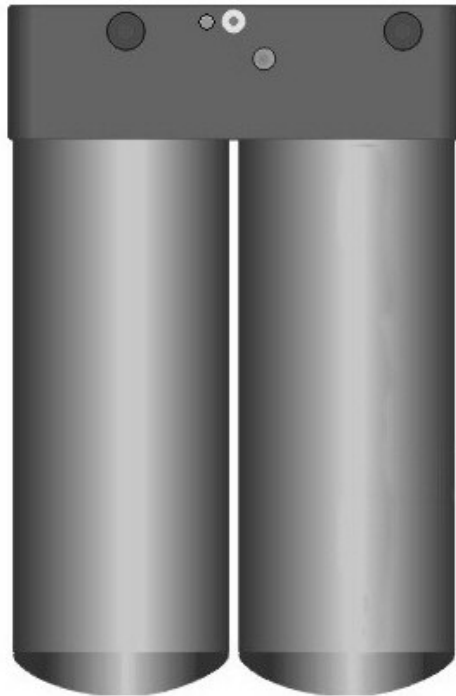

Using this high pressure (**200psi**) cartridge system means the fog is produced up to **10 times faster!**

The result.....

- A staggering fog delivery speed of **28 CUBIC METRES PER SECOND!**
- Fog is 'jetted' to reach and defend the perimeters of the protected room in seconds (**6 METRES IN FIRST 2 SECONDS ALONE!**)
- Very high density fog giving **MAXIMUM VISION IMPAIRMENT** (Eye to object reduced to just 25cm)
- Fog is completely **HARMLESS** and is safe to use in **ANY** environment
- Each Bandit protects areas of anywhere between **50 & 500 CUBIC METRES**

2. RELIABILITY.....

- Robust high-quality casing and components
- Full battery back up in event of mains failure
- Solid state electronics with permanent self-diagnostic monitoring
- Clean-filled and hermetically sealed HY3 steel cartridge to avoid fluid degradation

The result.....

- Any status changes (i.e. Mains failure, battery low, fluid low etc.) **INSTANTLY NOTIFIED** to both alarm panel and Bandit front display panel

- HY3** requires **NO** attention or maintenance whatsoever for at least **4 YEARS**

- NO PUMP** to potentially clog or fail

- HY3** refills quick and simple to exchange with potentially problematic spillages
COMPLETELY AVOIDED

3. RUNNING COSTS.....

- Internal heat exchanger given highest possible levels of insulation

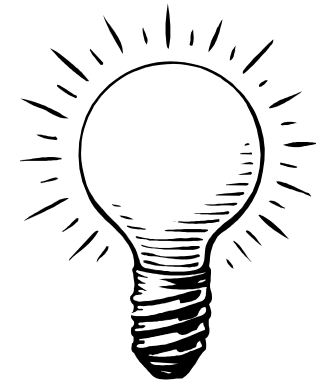

The result.....

- Power consumption equivalent to just

ONE 40 WATT

light bulb!

RUNNING COSTS cont.....

- Each HY3 cartridge produces a minimum of **1500** Cubic metres of high density fog

The result.....

- **NO** engineer **CALL-OUT CHARGES** after every activation – One HY3 can provide up to **25 ACTIVATIONS***

*subject to room size

RUNNING COSTS cont.....

- The **BANDIT CONTROL BOX** keeps general maintenance and servicing costs to a minimum with the following features.....

Control box features

- Isolation switch so main alarm system can be tested without activating the **BANDIT**
- Anti-Tamper override switch to allow easy exchange of HY3 cartridge refills
- One second test fire feature for **QUICK & SIMPLE** system check
- Test switch to check Alarm Panel is receiving self-diagnostic feedback signals from **BANDIT**
- Electronic indicator to provide % readout of HY3 fluid level

The overall result.....

The **BANDIT**
security fogging
system is
unbelievably fast,
is extremely reliable
and is very low cost
to run

So who needs BANDIT?

Here is a selection of typical Bandit end users:

Spirits and Tobacco vendors

Mobile Phone shops

Camera and Computer retailers

Computer Games retailers

Electronic goods wholesalers

& retailers

Fashion Boutiques

Motorcycle and Car Showrooms

Golf Pro Shops

Film/Game Rental Stores

Petrol Station shops

Schools & Colleges

Graphic Design Studios

Tool Hire shops

Jewellers

Storage Warehouses

Business Offices

Cash Offices

Banks

Antiques retailers

Summary of BANDITS'

Features	& Benefits
Fastest fogging system on the market	Instantly protects your stock and equipment from theft or damage
Produces very high density, completely harmless fog	Reduces possibility of internal property damage
Specifically designed to keep intruders out from the outset	Saves money, time and, as disruption to business is minimal, normal trading can be quickly resumed

Furthermore.....

- deters intruders from repeat attempts thus reducing repair bills on perimeter defences

The vital component.....

We can now appreciate that
a...

BANDIT

*“What can’t be
seen, can’t be
stolen”*

is an essential component of every modern
day security system

BANDITTM

*The world leader
in security
fogging*
